

Science Champion

| | |
|------------------|---|
| Intent | Our children will be curious learners, driven by our values of Respect, Aspiration and Resilience . We want our children to be inspired by the world around them and how it works. In order to have aspiration, our children need to “see” scientists, have the opportunity to speak to them and develop understanding of the many roles in life that a career in Science can provide. |
| Implement | It is important that children have solid fundamental foundations, These should not be rushed and the small steps approach to learning is embedded into our curriculum. Our goal is that children will retain knowledge and gain a gradual understanding of the key concepts over time, rather than a fixed block of time. This is reflected in our planning and checked through our termly pupil voice activity. To plan for progress, different types of tasks can be created that show a deeper understanding of the same content. These are Basic, Advancing and Deep learning challenges. |
| Impact | Our children enjoy learning Science, they know the key, fundamental facts in which they can apply their knowledge. They meet Scientists and have real experiences in a practical and meaningful way. |
